People buy and use a lot of things nowadays. After a while, they throw them away in the garbage can. All the garbage is later thrown away or dumped outside the city.</p> <p>About one-third of all the garbage is made of paper. Another third of the garbage is a mix of glass, metal, plastic, and wood. The final third comes from food scraps. <b>These</b> are remains of food that are not eatable any more. Food scraps are not a big garbage problem for the environment. Our natural world can get rid of food scraps. Insects and bacteria eat food scraps and make them go away.</p> <p>Another type of garbage we throw away is metal. The cans for soft drinks are made of aluminum. Aluminum is toxic too. The paper and wood we throw away are not toxic. But we have to cut down many trees every year to make paper and wood. Our environment suffers when there are no forests. The air is less fresh, and earth dries up. With no water on the earth, plants cannot grow. In fact, the best thing to do is to reduce the amount of garbage.</p> <p>31-Why should not people throw away the cans of drinks?</p> <p>32-How does paper destroy our environment?</p> <p>33-What is the topic word of the first passage? a. Throw away    b. Garbage    c. Plastic    d. Environment</p> <p>34-What does pronoun "<b>These</b>" in paragraph 2 refer to.....</p> <p>35-According the passage all garbage poisons the earth and the water. a. True    b. False</p> <p>36-We can infer from the passage that insects and bacteria help people to reduce garbage. a. True    b. False</p>	۱۲

۴	<p>متن زیر را بخوانید و به سوالات به صورت خواسته شده پاسخ دهید.</p> <p>Often the oil contains natural gas. It is dissolved in the oil because of the high pressure deep underground. When the drill penetrates the oil-bearing layer, this pressure is released. It provides a big push and may be sufficient to bring all the oil to the surface. If the gas pressure is not sufficient, a pumping station must be built to bring up the oil. This increases the cost of the drilling operation. In its natural 'crude' state oil consists of a mixture of various substances called hydrocarbons (compounds composed mainly of hydrogen and carbon). These substances must be separated according to their densities, and purified. This process is called refining. It is an industrial process whereby crude oil undergoes various chemical processes to be converted into products such as gasoline, diesel fuel, asphalt base, heating oil and liquefied petroleum gas.</p> <p>37-What is crude oil made of?</p> <p>38-What are different products that come from crude oil?</p> <p>39-It is clear in the passage that ..... a. natural gas in oil makes it harder to drill b. crude oil is mixed with only natural gas c. the higher the pressure, the less it costs to drill d. refining is the process of separating natural gas and oil</p> <p>40-Oil may not be brought to the surface without a pumping station. a. True                      b. False</p> <p>41-It could be drawn out of the passage that refining is the act of removing unwanted substances from the oil. a. True                      b. False</p> <p style="text-align: center;"><b>Good Luck</b> <b><i>"Knowledge is a beautiful thing that can fill us with happiness."</i></b></p>	۱۳
